

js style guide:

- * identifier names (variables and functions) use camelCase.

```
var myFunction;
```

- * all names start with a letter.

```
var foo = myFunction;
```

- * Always use spaces around operators, and after commas.

```
( + = - * / ),
```

- * Always use one tab for indentation of code blocks.

```
myFunction(){  
    var foo;  
}
```

- * Always use var for variables/references with this project.

```
good = var foo;  
bad = cont foo, let foo
```
